N O T I C E .

A. J. DOWNING having retired from the Nursery Business heretofore conducted at Newburgh under the firm of A. J. DOWNING & CO., the same will hereafter be continued by the subscribers. They will not only endeavor to maintain the high character which the Nurseries have had, for a long time, but as the present stock is gradually drawn off Mr. D.'s grounds, they will greatly enlarge the Nurseries and endeavor fully to meet the constantly increasing demand for the trees grown here.

Orders addressed to the subscribers, POST PAID, will receive prompt attention; and all trees, shrubs, plants, etc. will be carefully packed and shipped to any part of the Union.

A. SAUL & CO.

HIGHLAND NURSERIES, Newburgh, Feb. 15, 1847.

 The undersigned strongly recommends the above Nursery firm to public confidence. The practical management of the Nurseries will be in the hands of A. SAUL, who has been at the head of this department here for the last eight years, and his accuracy and fidelity in the propagation of fruits during that time, are the best guarantee for the faithful and careful manner in which the business will hereafter be conducted.

A. J. DOWNING.

HIGHLAND GARDEN, Newburgh, Feb. 15, 1847.

A D V E R T I S E M E N T.

The present proprietors in presenting to their patrons and the public, this edition of the Catalogue of their Nurseries, return their sincere thanks, for a continuation of the liberal patronage bestowed upon their predecessors, and they assure their friends and the public, that no pains or expense shall be spared to add to their already full stock all acquisitions of merit, as they are introduced both in this Country and Europe.

Since the last edition of the Catalogue of this establishment was published, we have had the satisfaction of proving a large number of new fruits, in addition to those whose qualities have heretofore been carefully tested in the gardens here. The utmost care is exercised in propagating genuine sorts, and we have great pleasure in offering our present stock of trees to the public, as worthy of their confidence.

The nurseries here were commenced about forty years ago, and now contain over thirty acres of ground, exclusively devoted to the culture of trees, shrubs and plants. The soil and climate of the Hudson Highlands have rendered the success of the trees sent from here, a matter of notoriety in all parts of the Union.

Gentlemen who are little familiar with the subject, and who will favor us with the number of each species of the fruit desired, as apples, pears, &c., are assured that a selection made with the utmost care, and comprising the **BEST**, will be furnished by the proprietors. Persons wishing trees of extra size, should always send their orders in the autumn, as the largest nurseries are thinned by a whole season's sale.

The proper seasons for transplanting are October, November and December, in the autumn, and March and April, in the spring. The autumn is the most favorable time for the transmission of trees to the south and west, and our experience in packing trees for transportation, renders their success as certain at the distance of one or two thousand miles, as in our immediate neighborhood.

The bundles of trees or plants will be shipped from New York to any portion of North America or Europe; and when it is desired, insurance will be effected—the purchaser being at the expense of the same.

The fluctuations in exchange, and the difficulty of obtaining remittances from some distant states, render it necessary for us to state, that all orders from those portions of the country must be accompanied by cash, or drafts on the city of New York, Boston, or Philadelphia, payable at sight, or within thirty days after the delivery of the trees.

All letters on business, or making inquiries, must, to insure attention, be post paid. Persons living out of the usual routes of transportation, are requested to state the particular line, or conveyance, by which the bundles of trees are to be sent, and the amount of heavy land carriage, and the trees will be packed accordingly. Orders by mail will receive the same attention and the trees will be as carefully selected as when the person ordering them is present.

N. B. Persons desiring a full and complete manual on the culture and propagation of fruit trees, directions for the care of orchards, modes of destroying insects, etc. etc., with descriptions and outline figures of all the finest fruits known in this country, are referred to Downing's "**FRUITS AND FRUIT TREES OF AMERICA**," recently published, and for sale by book-sellers in all the principal cities.

The **PEAR BLIGHT**, the "**YELLOWS**" in the peach, and a very successful mode of **PRUNING** the latter tree, are treated of at length in this work.

HEDGE PLANTS.

NAME.	PRICE per 100—per 1,000.
American Arbor Vitæ, 15 to 18 inches,	\$10 to \$12
" " 2 ft. to 30 inches,	18 to 25
" " 3 feet,	30
Buckthorn, one year old,	\$6 00
" two years old,	8 00
Honey Locust, one year old,	8 00
" two years old,	10 00
Osage Orange, two years old,	12 00
Privet or Prym, two years old,	5 to 10
Hawthorns, (of sorts), one year old,	6 00
Box for edging, 25 cents per yard.	

SCIONS and buds of the Fruit Trees enumerated in this Catalogue (including some not herein) will be furnished at 25 cents per dozen for Apples and Peaches, and 50 cents per dozen for Pears, Plums, &c. When less than a dozen of a kind is wanted the price will be the same as if a dozen were ordered, and when the kind ordered is new and rare and the price of the tree is more than 50 cents, in such cases the price of the tree will be charged for the number sent. When a large quantity of scions are wanted of the more plentiful of the standard varieties, they will be furnished by the 100 or 1000 at very reduced rates.

ORDERS for the above to insure attention should be sent during the winter, or not later than the 1st of March.

CUTTINGS of Grape vines, \$5 to \$12 per hundred.

Cuttings of Osier Willows, \$5 per thousand.

ORNAMENTAL TREES.

50 cents each, except those noted.

CLASS I.

DECIDUOUS.

Common Name.	Botanical Name.

Souvenir de la Malmaison,	cup.	Pale flesh, tinged with fawn,	1 00
Souvenir d'Andesclme.	cup.	Scarlet,	1 00

The Bourbon roses are the greatest acquisition which our flower gardens have received in the present age. With the invaluable habit of blooming the whole season, they unite the most delicious fragrance, vigorous and handsome habit, and broad and glossy foliage. Southward of this they are quite hardy, and here it is only necessary to throw over them some leaves, or a slight coat of litter, at the approach of winter, to be removed as soon as the spring opens.

HYBRID PERPETUAL ROSES.

Price \$1 00 each.

NAME.	FORM.	COLOR.
Auberon,	cup.	Brilliant crimson.
Augustine Mouchet,	cup.	Dark crimson, large.
Calliope,	cup.	Bright rose, brilliant.
Baron Prevost,	cup.	Bright rose, large and superb
Clementine Duval,	cup.	Bright cherry red.
Duchess of Sutherland,	glob.	Glossy blush.
Edward Jesse,	cup.	Lilac crimson.
Glorie de Guerin,	glob.	Purplish crimson.

NAME.	FORM.	COLOR.
Julia Dupont,	cup.	Deep pink.
Lady Alice Peel,	cup.	Deep pink, beautiful.
Lady Fordwich,	cup.	Deep rose, rich clusters.
Lane,	exp.	Deep rose, large.
Louis Bonaparte,	glob.	Rosy crimson.
La Reine,	cup.	Brilliant rose.
Madame Laffay,	cup.	Brilliant rosy crimson.

NEW AND RARE ROSES.

In addition to those enumerated in the foregoing classes, there are many others in course of propagation; and all novelties are procured as soon as they can possibly be obtained from the originators or introducers, both in this country and Europe.

A CHOICE COLLECTION of hardy Herbaceous plants; Carnation Pinks, Picotees; Double Dahlia's; Verbena's, Petunia's, Salvia's, and other choice plants for ornamenting the Flower Garden in summer: also, Maurandia Barcleyana, Calampalis Scaba, Lodhospermum Scandens, and other beautiful tender climbing plants for pillars, trelliswork, &c. &c.

HINTS FOR TRANSPLANTING.

BY A. J. DOWNING.

I. Many persons plant a **TREE** as they would a **POST**! The novice in planting must consider that a tree is a living, nicely organized production, as certainly affected by good treatment as an animal. Many an orchard of trees, rudely thrust into the ground, struggles half a dozen years against the adverse condition before it recovers.

II. In planting an orchard, let the ground be made mellow by repeated plowing. For a tree of moderate size the hole should be dug three feet in diameter, and twelve to twenty inches deep. Turn over the soil several times, and, if not rich, mix thoroughly with it some compost, or well rotted manure. In every instance the hole must be large enough to admit all the roots easily, without bending. Shorten and pare smooth with a knife, any bruized or broken roots. Hold the tree upright, while another person, making the earth fine, gradually distributes it among the roots. Shake the tree gently while this filling is going on. **THE MAIN SECRET LIES IN CAREFULLY FILLING IN THE MOULD, SO THAT EVERY ROOT, AND EVEN THE SMALLEST FIBRE, MAY MEET THE SOIL;** and to secure this, let the operator with his hand spread out the small roots, and fill-in the earth, nicely around every one. Nine tenths of the deaths by transplanting arise from the hollows left among the roots of trees by a rapid and careless mode of shovelling the earth among the roots.

III. When the hole is two-thirds filled pour in a pail or two of water. This will settle the soil and fill up any little vacuities that may remain. Wait until the water has sunk away and then fill up the hole, pressing the earth moderately around the trees with the foot. The moist earth, being covered by the loose surface soil, will retain its humidity for a long time. Indeed we rarely find it necessary to water again after planting in this way, and a little muck or litter placed around the tree, upon the newly moved soil, will render it quite unnecessary. Frequent surface watering is highly injurious, as it causes the top of the soil to bake so hard as to prevent the access of air and light, both of which, in a certain degree, are absolutely necessary.

IV. Avoid the prevalent error (so common and so fatal in this country) of planting your trees too deep. They should not be planted more than an inch deeper than they stood before. If they are likely to be thrown out by the frost the first winter, heap a little mound about the stem, to be removed again in the spring.

V. If your soil is positively bad, remove it from the holes, and substitute a cartload or two of good garden mould. Do not forget that plants must have food. Five times the common growth may be realized by preparing holes six feet in diameter and twice the usual depth, enriching and improving the soil by the plentiful addition of good compost. Young trees cannot be expected to thrive well in **SOD LAND**. When a young orchard **MUST** be kept in grass, a circle should be kept dug around each tree. But cultivation of the land will cause the trees to advance more rapidly in five years than they will in ten, when it is allowed to remain in grass.
